# Software Architecture Document

## 1. Introduction

### 1.1 Purpose

This document provides a comprehensive architectural overview of the system, using a number of different architectural views to depict different aspects of the system. It is intended to capture and convey the significant architectural decisions which have been made on the system.

### 1.2 Scope

Project “EventShare” includes both a web component and android components to be developed. This document contains only the architecture and some design of the web component.

### 1.3 References

1. Requirement Specification Document - version 1

### 1.4 Overview

This document contains several diagrams of the architecture of the system. User case view shows several use cases that are related to the architecture. Logical view shows the logical layers and modules. Deployment view shows components when the system is deployed. Implementation view focuses on the mapping of the Logical view conceptual components to the actual implementation artifacts. It presents that actual software module organization in the development environment. Also it presents ER diagram of the database and class diagrams for individual components.

## 2. Architectural Representation

### 2.1 Use case view

- Event handler
- Subscription handler
- Authentication manager

### 2.2 Logical View

- GUI layer
- Authentication layer
- Event handler
- Subscription manager
- Notification handler
- Database Manager
- Database

### 2.3 Deployment View

- Web browser
- User interface
- “EventShare” server
- Android phone

|                                |                    |
|--------------------------------|--------------------|
| eventShare                     | Version: <1.0>     |
| Software Architecture Document | Date: <15/08/2013> |

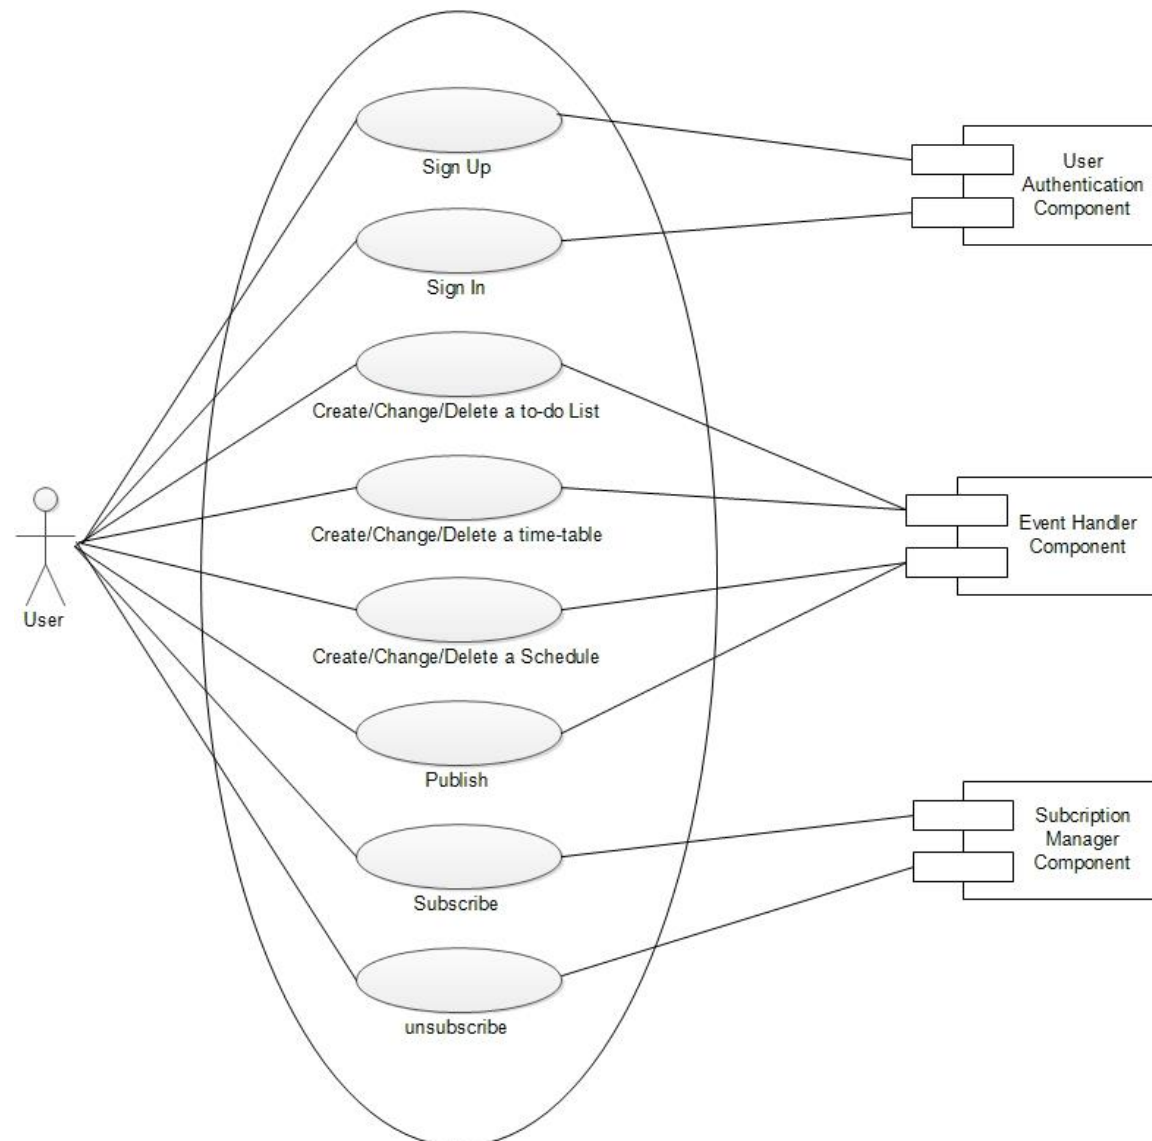

## 2.4 Implementation view

- User interface
- Authentication manager
- Event handler
- Subscription manager
- Notification handler
- Database manager
- Database

## 3. Architectural Goals

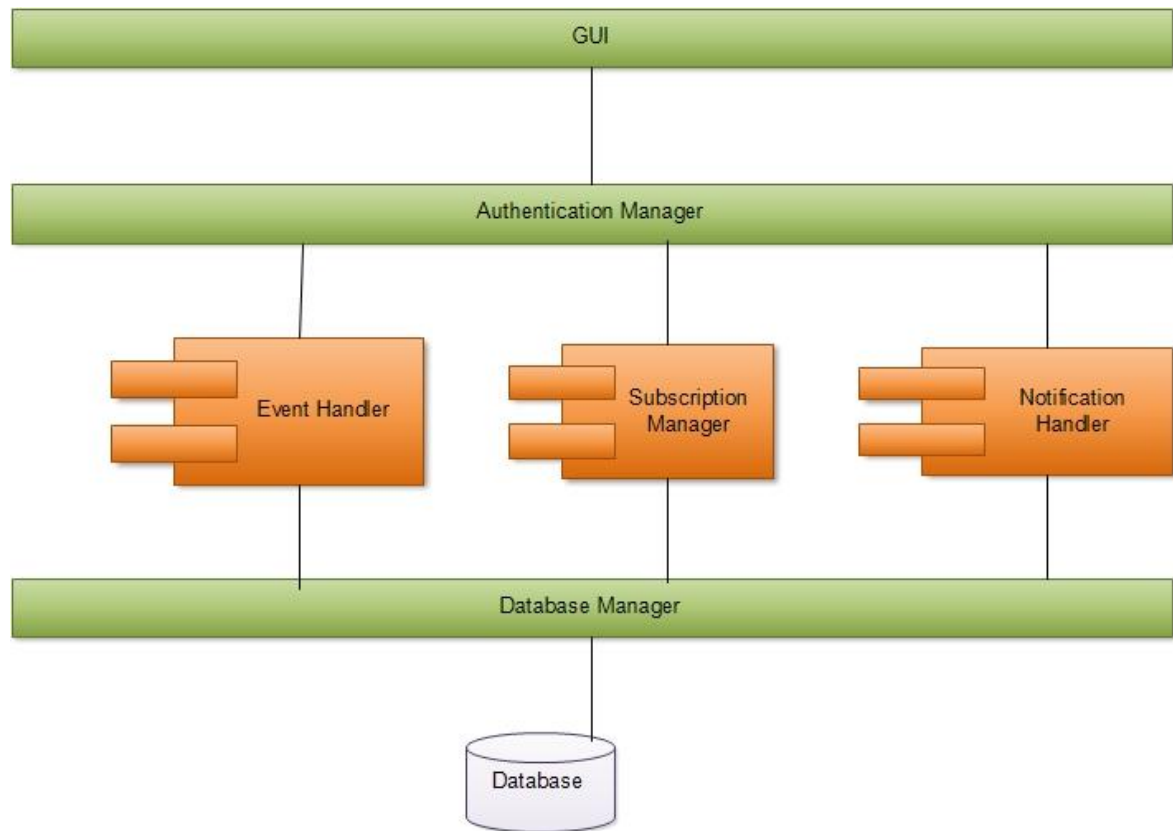

The goal is to come up with an architecture that meets all the requirements specified [1].

## 4. Use-Case View

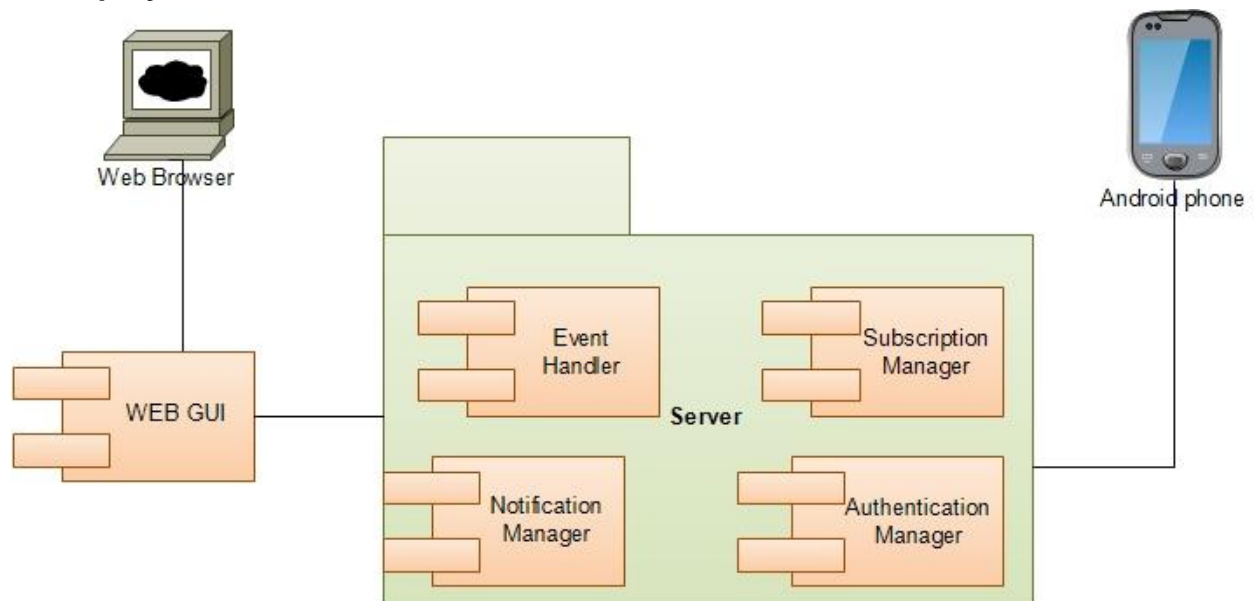

|                                |                    |
|--------------------------------|--------------------|
| eventShare                     | Version: <1.0>     |
| Software Architecture Document | Date: <15/08/2013> |

## 5. Logical View

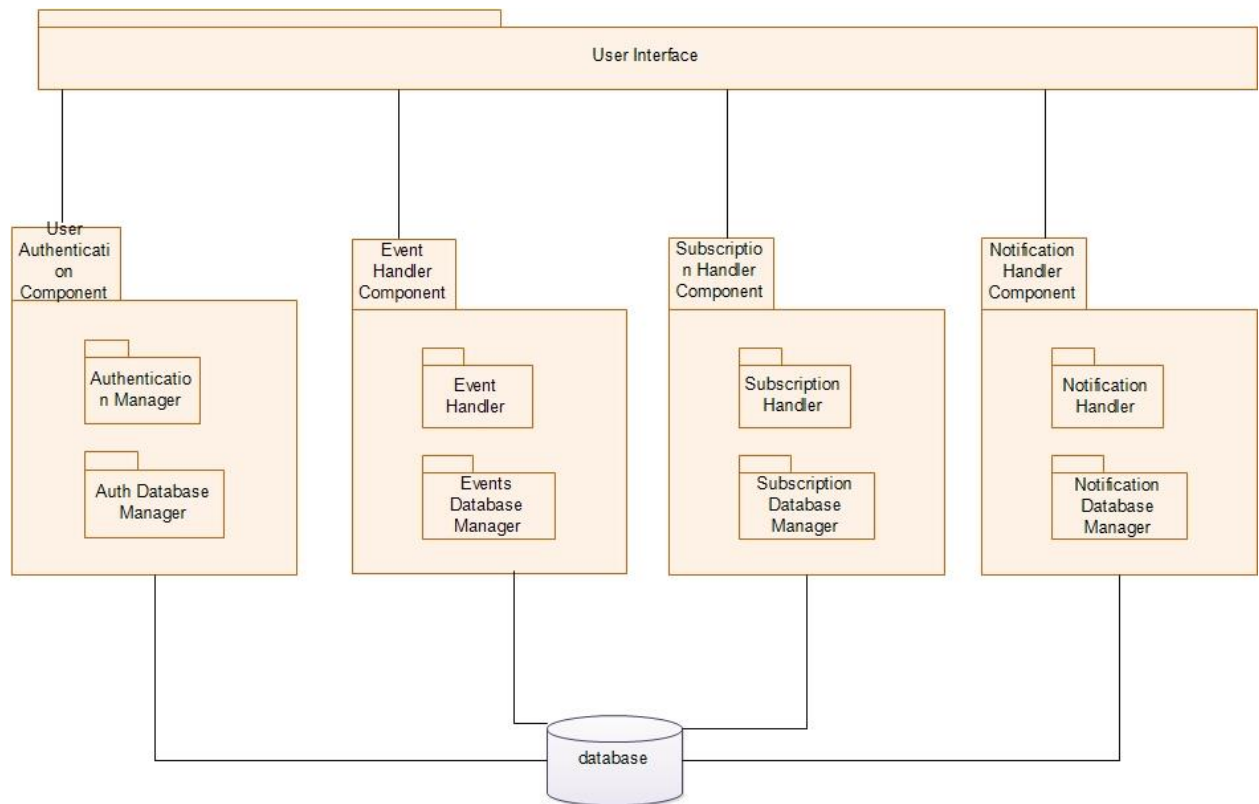

## 6. Deployment View

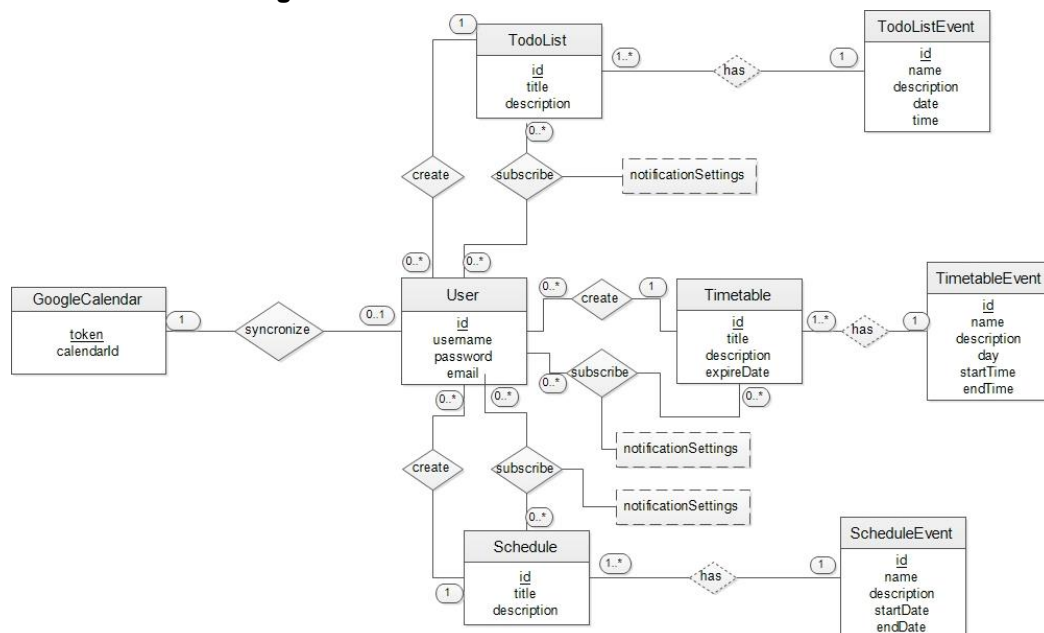

|                                |                    |
|--------------------------------|--------------------|
| eventShare                     | Version: <1.0>     |
| Software Architecture Document | Date: <15/08/2013> |

## 7. Implementation View

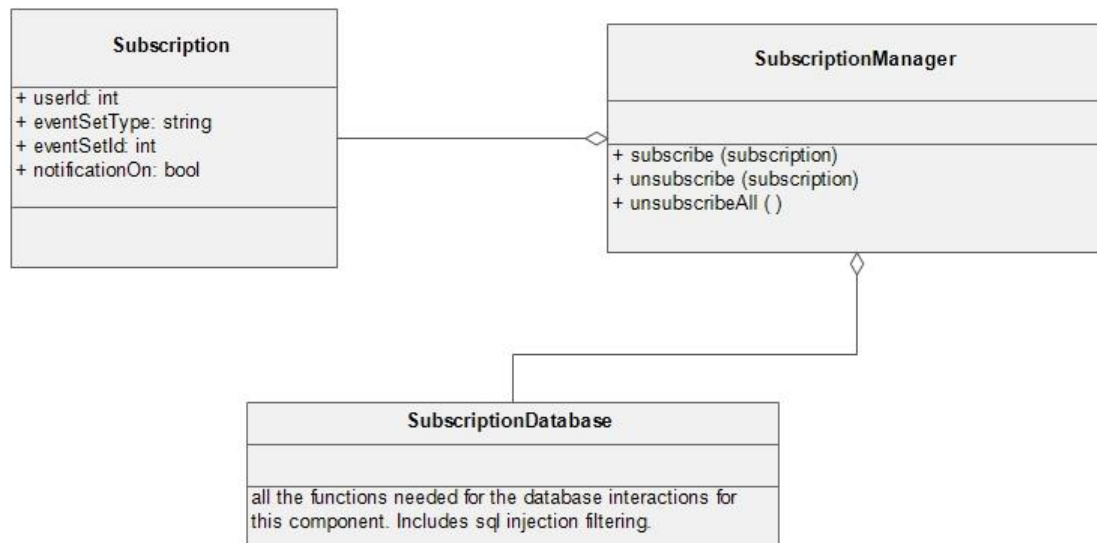

### 7.1 Database ER diagram

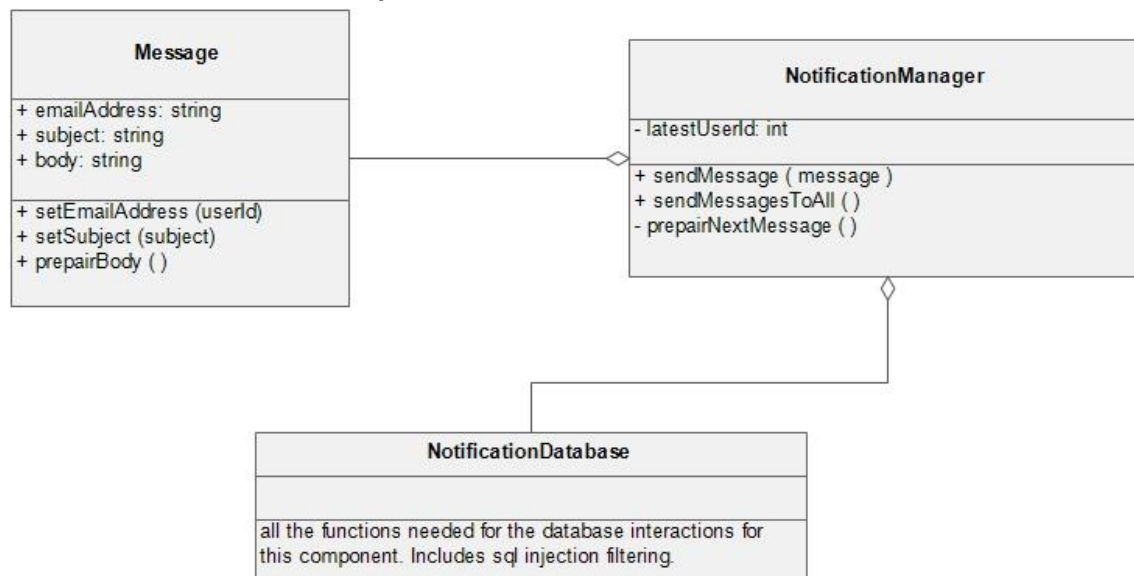

|                                |                    |
|--------------------------------|--------------------|
| eventShare                     | Version: <1.0>     |
| Software Architecture Document | Date: <15/08/2013> |

## 7.4 Subscription manager component

## 7.5 Notification handler component

## 8. Quality

Following quality attributes are expected to be met

- Reliability
- Performance
- Changeability
- Usability
- User friendliness
